

Pythoff PLUS

Eliminates nutrient by-products in hydroponic systems

- **Maintains the condition and effective working life of nutrient solutions** - 0.5ml/L. This prevents the accumulation of nutrient by-products and blocked drippers.
- **The ultimate weekly 'flush'** - Pythoff PLUS restores the condition of the rootzone, medium and hardware during the "weekly" system flush (0.5ml/L).
- **Maintains 'stored' water (RO and rain water)** used for making nutrient solutions - Pythoff PLUS maintains its condition and prevents "stagnation" (0.5ml/L). This prevents the likelihood of contaminating the working nutrient solution.
- **Improves post-harvest system clean-up** - Pythoff PLUS cleans system hardware AND "recyclable" mediums to prevent contamination of the next crop (2ml/L).
- **Pythoff PLUS is "standardized" to a specific concentration and has a shelf-life of 10 yrs plus** - The correct dosage is critical as underdosing will provide no benefit, and overdosing will harm roots.
- **Safe to use from seed to harvest** - Pythoff PLUS is very gentle on roots.
- Pythoff PLUS is **fully compatible with all FloraMax additives**.
- Dosage: Nutrient solutions, flush water and stored water, 0.5ml/L | Post-harvest system clean-up, 2ml/L.
- Available in: 1L // 5L // 20L
- **CAUTION:** Incompatible with peroxides, hypochlorous acid, beneficial bacteria or "live" systems.

Pythoff PLUS eliminates nutrient by-products

TESTIMONIALS

“

"I had chronic problems with root diseases damaging and killing my plants. Now I find that not only has the damage ceased, but even seriously badly damaged plants can be regenerated".

"No more do I see signs of bad stuff in the tanks i.e. clouds of white slimy gack floating in the tanks and collecting on the air stone. Plants are now just scorching along."

”
